AMENDMENT UNDER 37 C. F. R. §1.111

Sir:

In response to the Office Action mailed October 23, 2002, please amend the above-identified application as follows:

In the Specification:

Please substitute the following paragraphs for the corresponding paragraphs beginning at the indicated location in the specification as originally filed. A marked up copy of these paragraphs showing currently requested changes is attached as an Appendix to this response.

Page 9, line 16+:

Referring now to Figures 5A - 5C, the position of a mold for forming the vertical silicon pillar which will form the vertical conduction channel of the transistor is defined by application of a resist 510. The resist is then exposed using a hard phase shift mask or other lithographic process or other process techniques such as spacers to control width and developed to form a narrow (possibly of sub-lithographic width) linear pattern 520 across the non-STI region. Then, in accordance with the patterned
